

# Workshop on **BACTERIAL PATHOGENESIS**

Nov 18-20th

**SBM**

# Workshop on Bacterial Pathogenesis

Sociedade Brasileira de Microbiologia (SBM)

November 18<sup>th</sup> to 20<sup>th</sup>, 2020

## Program

November 18<sup>th</sup> (Wednesday)

### Opening Lecture

|             |                                                                                                                               |
|-------------|-------------------------------------------------------------------------------------------------------------------------------|
| 13:00-14:00 | Michael Otto<br>National Institutes of Health, EUA<br><b>Anti-virulence strategies to combat <i>Staphylococcus aureus</i></b> |
|-------------|-------------------------------------------------------------------------------------------------------------------------------|

### Conferences

|             |                                                                                                                                            |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 14:00-14:30 | Michelle Buckner<br>University of Birmingham, United Kingdom<br><b>Could targeting plasmids help reduce antimicrobial resistance?</b>      |
| 14:30-15:00 | Neta Sal-Man - Ben-Gurion<br>University of the Negev, Israel<br><b>Bacterial-host interactions and how competing pathogens affect them</b> |

### Break

|             |                                                                                                                                          |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------|
| 15:15-15:45 | Josie Chandler<br>University of Kansas, EUA<br><b>Bacterial social behaviour: communication, cooperation and conflict among microbes</b> |
| 15:45-16:15 | Stephanie Shames<br>Kansas State University, EUA<br><b>A novel role for bacterial effector regulation by metaeffectors</b>               |

## November 19<sup>th</sup> (Thursday)

|             |                                                                                                                                                                                  |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13:00-13:30 | André Báfica<br>Universidade Federal de Santa Catarina (UFSC)<br><b>Via endógena de ácido retinóico durante a infecção por <i>Mycobacterium tuberculosis</i></b>                 |
| 13:30-14:00 | Flávio Lara<br>Fundação Oswaldo Cruz (Fiocruz)<br><b>Subversão do metabolismo energético durante a infecção pelo <i>Mycobacterium leprae</i></b>                                 |
| 14:00-14:30 | Rosana Ferreira<br>Universidade Federal do Rio de Janeiro (UFRJ)<br><b>A microbiota da pele no combate às bactérias multirresistentes. É possível encontrar novos compostos?</b> |

### Break

|             |                                                                                                                                                                                                                                       |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14:45-15:15 | Ângela Barbosa<br>Instituto Butantan<br><b>Proteases secretadas por espiroquetas do gênero <i>Leptospira</i>: potenciais alvos e implicações na virulência</b>                                                                        |
| 15:15-15:45 | Fernando Martins<br>University of Texas Southwestern Medical Center, USA<br><b>Ativação de vias de sinalização pró-inflamatórias em resposta aos pedestais de actina formados por <i>Escherichia coli</i> enteropatogênica (EPEC)</b> |
| 15:45-16:15 | Ethel Bayer Santos<br>Universidade de São Paulo (USP)<br><b>Targeting the Achilles' heel of bacteria: a novel family of antibacterial T6SS effectors affecting the peptidoglycan</b>                                                  |

## November 20<sup>th</sup> (Friday)

### Conferences

|             |                                                                                                                                                               |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13:00-13:30 | Christian Rueter<br>University of Muenster, Germany<br><b>Secretion and delivery of <i>Escherichia coli</i> virulence factors via outer membrane vesicles</b> |
| 13:30-14:00 | Andrew Roe<br>University of Glasgow, Scotland, UK<br><b>Where am I? D-serine sensing helps drive niche specificity in pathogenic <i>Escherichia coli</i></b>  |
| 14:00-14:30 | Fernando Ruiz-Perez<br>University of Virginia, EUA<br><b>Immunomodulatory serine proteases in pathogens of Enterobacteriaceae</b>                             |
| 14:30-15:00 | John Leong<br>Tufts University School of Medicine, EUA<br><b>Microbial tools to characterize age-associated innate immune dysfunction</b>                     |

### Break

|             |                                                                                                                                |
|-------------|--------------------------------------------------------------------------------------------------------------------------------|
| 15:15-16:15 | Vanessa Sperandio<br>University of Texas Southwestern Medical Center, USA<br><b>The highs and lows of Bacterial Infections</b> |
|-------------|--------------------------------------------------------------------------------------------------------------------------------|

### Organizers:

Sociedade Brasileira de Microbiologia (SBM)

Luis Caetano M. Antunes (Fundação Oswaldo Cruz - Fiocruz)

Rodrigo T. Hernandes (Instituto de Biociências – UNESP – Botucatu)
